ORBIS

The Master Guide to the Product
Communication, identity and protection in one app

Keep your commitments. Work clearly. Protect what matters.

Core engine | Growth | Aura profile | Culture rules | Privacy layer | Orbis Work (planned)

Designed-to descriptions only. No security, legal compliance or launch outcome is guaranteed.
Legal points are to be confirmed by counsel per market before launch.

Document Control

Field	Value
Title	Orbis Master Guide: the complete product description
Document ID	ORBIS-MG-003
Version and status	0.4 | DRAFT for founder review
Date of issue	18 October 2026
Document owner	Founder
Classification	Confidential. Internal and invited collaborators only.
Language	English. Bahasa Indonesia planned at launch.
Next review	When a Decision Register item changes, or before any launch

Revision history

Version	Date	Summary
0.1	17 Oct 2026	First master guide (three products).
0.2	18 Oct 2026	Adopted Orbis as the umbrella brand; standard guide format.
0.3	18 Oct 2026	Single product: Orbis, with Aura (profile), Culture (company rules), Orbis Work (planned module), privacy protection layer.
0.4	18 Oct 2026	Merged the 5–9 Freedom Lab playbook as the Growth layer; added growth rules, stages, claim discipline, monetization rules and decisions D-09 to D-11. Renumbered parts.

Foreword and Scope

This guide describes **Orbis** as one product: a communication engine that helps people keep their commitments, protected by a privacy layer, with self-chosen personal profiles (Aura), optional company rules (Culture) and a planned job module (Orbis Work). It describes the intended product, not a built one.

Status label	Meaning
[ESTABLISHED CONCEPT]	Already part of the founder's vision.
[PROPOSED DESIGN]	Proposed design, needs a decision or build.
[VALIDATION REQUIRED]	Hypothesis, needs evidence before commitment.
[FUTURE VISION]	Future module, not scheduled.

Requirement language

Word	Meaning
SHALL	Mandatory. The product is not acceptable without it.
SHOULD	Recommended. Omit only with a recorded reason.
MAY	Optional.
SHALL NOT	Prohibited.

> [ESTABLISHED CONCEPT] **Honesty rule.** No market data, customer numbers, revenue, integrations, launch dates or security guarantees are asserted. Where a number is needed, the guide says to measure a baseline first.

PART I

Orbis Overview

One product: a communication engine that keeps commitments, protected by a privacy layer, with self-chosen personal profiles and company rules.

1. Product promise

Orbis helps people keep their commitments and communicate clearly, while their conversations, identity and work stay protected. It is designed to reduce the effort of chasing replies, remembering promises and finding context, and to keep work and personal life in separate spaces. After work, a Growth layer helps people turn learning and personal goals into visible, measurable output.

> [PROPOSED DESIGN] **Designed to, not guaranteed.** Orbis is described here as the team intends it to work. No security, encryption or outcome guarantee applies until it has been built and independently tested.

2. Brand and naming

Name	Role	Status
Orbis	The product and the brand.	[ESTABLISHED CONCEPT]
Aura	The personal profile: work style, strengths, growth edges, portfolio, shown with the color archetype language from Chromatica.	[PROPOSED DESIGN]
Culture	The company's working rules: hours, tone, approval steps. Optional for companies.	[PROPOSED DESIGN]
Growth	Personal learning and progress layer, from the 5–9 Freedom Lab method. After-work time, separate from work data.	[PROPOSED DESIGN]
Orbis Work	A planned job-discovery module (search, introduction, conversation).	[FUTURE VISION]
Chromatica and System.GPT	Earlier working names. Their essence lives in Aura (color archetypes and self-reflection) and Culture (practical rules and systems). Used in brand storytelling only.	[PROPOSED DESIGN]

Orbita is retired as a product name to avoid confusion with Orbis. Its functions are now core features of Orbis.

3. Who it is for

Customer	What they get	How they pay
Individual users (B2C)	Core communication features, personal Aura, personal privacy controls.	Free plan, with an optional personal paid plan.
Companies (B2B)	Team workspace, Culture rules, admin controls, audit trail.	Per-seat team plan.
Job seekers and employers	Orbis Work (planned): portfolios, search, introductions.	Planned. Pricing to be decided.

4. Core principles

Principle	What it means
Privacy is the protection layer	Built into every feature. Not a marketing theme.
Human in control	AI suggests with a reason. The person decides. Nothing is sent without approval.
Explainable	Every suggestion shows why it appeared and the source it came from.
Work and personal are separate	Separate spaces, quiet hours and urgent-only exceptions by default.
Self-chosen identity	Aura is created and edited by the person, never inferred from their messages.
Fair in hiring	Personality never ranks, filters or rejects candidates. Human review is required for hiring decisions.
Accessible	Screen-reader support, plain language, text labels alongside color.
Start from real use	Build from a real problem, test with real people, and show what failed as well as what worked.
Evidence before expansion	Each layer earns the next one through measured results.

PART II

Users and Experience

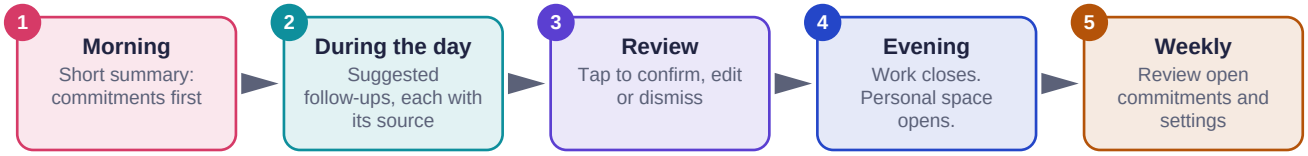

Who uses Orbis, how a typical day works, and what each person sees.

5. Users

User	Main need	Typical use
Freelancer or consultant	Stop losing track of client promises.	Follow-up queue, commitments, invoice reminders.
Sales professional	Follow up on time without manual tracking.	Follow-up timing, summaries before calls.
Founder or manager	See what is open across many threads.	Summaries, shared commitments (team plan).
Employee in a company	Work clearly, leave work at the end of the day.	Culture rules, quiet hours, personal space.
Job seeker (Orbis Work, planned)	Be found for the right roles.	Portfolio, Aura, introductions.
Company admin	Set working norms and control data access.	Culture rules, workspace settings, audit log.

6. A typical day

[PROPOSED DESIGN] **Example.** A consultant gets a suggestion: "Client asked for the revised quote. You said you would send it Friday." The original message is shown beside the suggestion. She edits the draft, sends it herself, and marks the commitment done. Nothing went out without her.

7. Aura: the personal profile

[PROPOSED DESIGN] Aura is self-chosen and fully editable. It contains the person's work style, strengths, growth edges and a portfolio the person chooses to show. Its color archetype (twelve archetypes from the Chromatica world) gives a shared visual language.

Aura rule	Detail
Created by the person	Through a short self-reflection quiz or by hand. Never inferred from messages.
Visibility	Private by default. Shared only when the person chooses, per item.
Used for	Personal reflection, communication preferences, and context in an introduction the person accepts.

Aura rule	Detail
Never used for	Ranking, filtering, rejecting or scoring any person, or for employer decisions.
Sensitive content	Health, religion, political views, and similar data are not collected. Written content of this kind is warned about and excluded from matching and search.
Control	Edit, hide or delete at any time. Deletion is complete within the retention window in Section 18.

8. Culture: company rules

[PROPOSED DESIGN] Culture is an optional set of working norms an organization can publish: hours, tone of messages, approval steps and quiet-hour defaults.

Culture rule	Detail
Optional	A company may use Culture or not. Employees are never forced into a company's rules beyond the workspace.
Visible	Employees can read every rule that applies to them and why.
Scope	Applies inside the workspace only. Personal life is outside its reach.
Admin limits	Admins set rules. They do not see private message content.

PART III

The Communication Engine

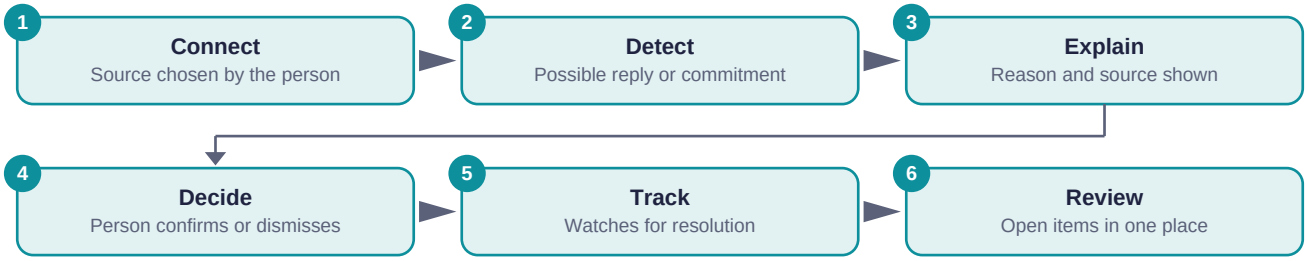

Follow-ups, commitments, search and summaries across the sources a person connects.

9. Core features

Feature	What the person gets	Status
Follow-up queue	Messages that may need a reply, with reason and source. Confirm, edit, snooze or dismiss.	[PROPOSED DESIGN]
Commitment tracking	Promises, requests and deadlines extracted with their source. Dates are used only when stated.	[PROPOSED DESIGN]
Search by meaning	Ask in plain words. Results show the original message.	[PROPOSED DESIGN]
Thread summaries	Main topic, decisions, open questions. Facts are separated from guesses.	[PROPOSED DESIGN]
Quiet hours	Work alerts stop at the end of the day unless marked urgent.	[PROPOSED DESIGN]
Drafts	A suggested reply for review. Never sent without approval.	[PROPOSED DESIGN]

10. How a suggestion is made

Rule	Requirement
Explainability	Every suggestion SHALL show its reason and the source message.
Uncertainty	Inferred items SHALL be labeled as suggestions, never as facts.
No invention	The system SHALL NOT invent a date, owner or amount that was not stated.
Correction	A dismissed or wrong item SHALL teach the system and be easy to fix.
Sending	The system SHALL NOT send any message without explicit approval.

11. Sources

[PROPOSED DESIGN] Sources are connected only with explicit consent and only where the provider allows it. Which sources launch first is an open decision (D-03). Orbis SHALL NOT scrape restricted conversations or collect credentials beyond what a connection requires.

PART IV

Growth Layer (from the 5–9 Freedom Lab)

A personal learning and progress layer for after-work time, built on the Freedom Lab method. Separate from work data.

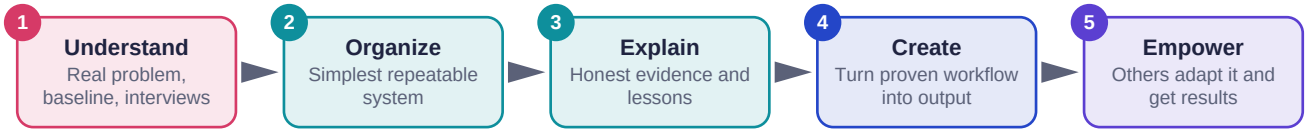

Purpose and origin

[PROPOSED DESIGN] The 5–9 Freedom Lab playbook describes a method for turning learning and personal goals into visible, measurable output after work hours. Orbis adopts that method as the Growth layer. The name "5–9" refers to after-work time; Orbis keeps that time protected from work alerts, so the two fit together.

> **[VALIDATION REQUIRED] Scope boundary.** Growth is a personal tool. It does not coach, diagnose or decide a person's purpose, and it does not claim that tracking will create wealth, discipline or success.

The five-stage method

The same order governs the product. Each stage must produce evidence that makes the next stage more grounded.

What the Growth layer contains

Feature	What the person gets	Status
Curriculum	Domains, objectives, modules and resources, with explicit "not now" choices.	**[PROPOSED DESIGN]**
Key results	Measurable goals with baseline, target and current value.	**[PROPOSED DESIGN]**
Session log	Time, category, output and a short reflection after each work block.	**[PROPOSED DESIGN]**
Weekly review	Output, blockers and energy reviewed as evidence, not guilt. No streaks that punish missed days.	**[PROPOSED DESIGN]**
Before and after metrics	Planning time, time to start, completion rate and consistency, compared to a recorded baseline.	**[PROPOSED DESIGN]**
Progress card	An opt-in summary the person designs, with chosen metrics and a date range.	**[PROPOSED DESIGN]**
Export	Everything in the Growth layer can be exported or deleted.	**[PROPOSED DESIGN]**

Growth rules

Rule	Requirement
Separate from work	Growth data SHALL be stored apart from work communication data.
No work-message analysis	Growth SHALL NOT read work messages to infer progress unless the person explicitly opts in for a named feature.
Private by default	Personal notes, finances and sensitive goals are private. Sharing is always a deliberate step.
No ranking	No leaderboards, public scores or comparisons between people.
No guaranteed outcomes	Copy SHALL NOT promise productivity, income or success.
Rest counts	Energy, stress and relationships are part of every review.

Weekly rhythm

Moment	Action	Time suggestion
Weekly planning	Choose one main outcome and up to three supporting actions.	20–30 min
Work sessions	Focused block; end by writing the next action.	25–90 min
Weekly review	Review evidence: output, blockers, energy.	20 min
Monthly review	Decide what to continue, simplify, pause or stop.	30–60 min

Claim discipline

Results are shown as personal, time-bound evidence, for example: "In my four-week test, planning time fell from X to Y minutes using this method." Null and negative results are shown too. A personal case is evidence about one use case, not proof of universal results.

Monetization and recommendations

Option	Rule
Core Growth features	Free. The core value must stand on its own.
Affiliate recommendations (optional, later)	Disclosed beside each link. Alternatives and limits shown. Never affects ranking inside Orbis. Never shown in work or privacy surfaces.
Paid templates or kits (later)	Describe exactly what is included and who it suits.
Paid convenience features (later)	Only after recurring value is shown. Essential data is never locked away.

Community (deferred)

Public feeds, sharing rituals and community challenges belong to a later stage. They require moderation, safety review and privacy controls before any public feature is offered.

Growth stages and gates

Stage	Product	Gate to move on
0. Personal system	The founder's own curriculum and tracker in a simple tool.	Used for at least four weeks; repeatable value identified.
1. Free template	A simple template and setup guide.	10–20 target users try it; real feedback collected.
2. Inside Orbis	Growth module in the app, starting with session log and weekly review.	Users return weekly; the module solves a recurring problem.
3. Focused app features	Curriculum, key results, before and after metrics, progress card.	Retention and user outcomes justify continued development.
4. Community	Template discovery and sharing, after safety review.	Safety, moderation and privacy are proven.

[PROPOSED DESIGN] **Build rule.** If a spreadsheet or template already solves the problem adequately, do not build software for it yet. Growth is added inside Orbis only after the template stage shows repeated use.

How a person would use this

[ESTABLISHED CONCEPT] After work, open the Growth tab. Pick one outcome for the week and log a 45-minute session with what you produced. On Sunday, review the week: what got done, what got in the way, how your energy was. Share a progress card only if you choose to, with the metrics you pick. Work messages never feed into any of this.

PART V

Privacy Protection Layer

Privacy is the protective layer around every feature. It is designed in, and each claim is tied to what is built and tested.

12. Principles

Principle	Requirement
Minimum data	Process only what the active feature needs.
Consent	Each source, each Aura share and each Culture rule needs a clear choice.
Visibility	The person sees what Orbis reads, stores and shares, in a privacy dashboard.
Control	Disconnect, export and delete in one place.
Separation	Work and personal data are separate; private and team-shared data are separate.
Kill switch	A person can pause all AI features. An admin can pause them for a workspace.
Audit	Important actions are logged, and users can see their own log.

13. Data by category

Data	Collected?	Use	Never used for
Message references and extracted commitments	Yes, from connected sources only	Follow-ups, commitments, search	Training, advertising, profiling
Message content	Only where needed for a feature	Summaries and suggestions	Anything outside the feature
Aura (self-chosen profile)	Yes, with the person’s input	Personal reflection, chosen context	Ranking, rejecting, employer decisions
Portfolio items	Yes, chosen by the person	Shown to others the person picks	Matching without consent
Health, religion, political views, similar	No. Warned and excluded if written	None	All uses

14. Sensitive content

Aura and portfolio fields do not ask for health, religion, political views or similar sensitive data. If a person writes such content, Orbis warns them, and the content is excluded from matching, search and summaries.

15. Other people’s data

Connected threads contain messages from people who may not use Orbis. Only messages needed for a feature are processed. Non-users can request an objection or removal through a form. Their data is never used for matching or profiling.

16. Identity and trust

Stage	Verification
Personal account	Light verification (for example, a confirmed email and phone).
Before a hiring stage (interview invitation, offer, contract)	Stronger verification, such as a document or work-email check.
Reporting	Users can report scams and fake profiles. Reports reach a human review queue.

17. Explainability and human review

Every automated suggestion shows its reason and source. Hiring-related decisions always require a human reviewer, and candidates can ask how a result was reached.

18. Retention and deletion

Data	Retention
Message references and commitments	While the source is connected, plus 30 days after disconnect, then deleted.
Aura and portfolio	Until the person deletes them.
Audit logs	12 months, then deleted.
Backups	Deleted within a stated window (target 30 to 90 days), disclosed in the privacy notice.
Deletion requests	Confirmed in the app with a receipt.

> **[VALIDATION REQUIRED] Legal baseline.** One design, built to the strictest common standard: data minimization, consent, deletion rights, explainability and human review. Each market needs a short addendum confirmed by counsel: Indonesia (PDP Law), the EU (GDPR and AI Act) and US states (automated hiring rules).

PART VI

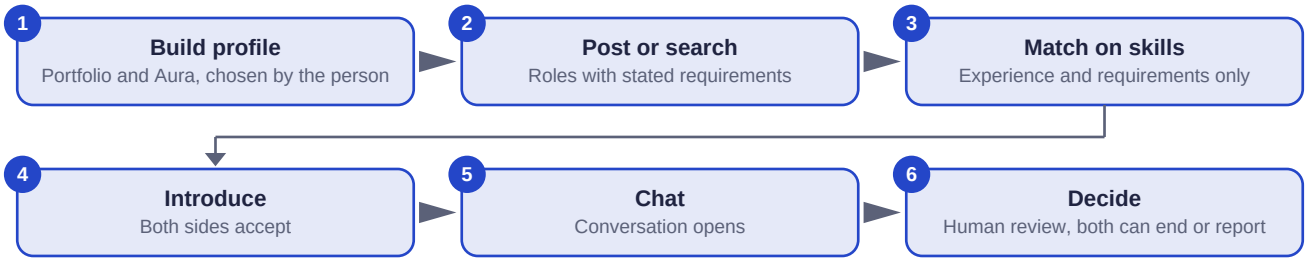

Orbis Work (Planned Module)

Job discovery and introductions. Designed to be added after the core is proven. Not in the first release.

[FUTURE VISION] This module is a future vision. Scope, pricing and launch are not decided.

19. How it works

20. Fairness rules

Rule	Requirement
No personality ranking	Aura SHALL NOT rank, filter or reject candidates.
Matching criteria	Skills, experience and stated requirements only.
Context, not scoring	Each side may view the other's Aura and Culture to set expectations.
Human decisions	Hiring decisions are made by people, with the reason visible.
Exit	Either side can end a conversation, report it or delete the record.

[VALIDATION REQUIRED] **Launch conditions.** Orbis Work SHALL NOT launch until the marketplace trust model, verification, anti-fraud review and per-market hiring law review are complete.

PART VII

Architecture and Data

The product structure behind the experience. Proposed design for evaluation.

Figure 1. Proposed Orbis architecture, from user interface to privacy controls.

21. Core data entities

Entity	Key fields
Person	Account, verification level, workspace membership.
Source	Provider, consent record, scope, status, revocation.
Message reference	Source ID, sender, timestamp, permission context.
Commitment	Description, responsible person, stated date (if any), status, confidence, source link.
Aura	Owner, self-entered fields, visibility per item.
Culture rule	Workspace, rule text, applies-to, visible to members.
Audit event	Actor, action, time, object. Kept 12 months.

22. Non-functional targets

Area	Requirement
Availability	A target to be set after the first beta baseline. No promise until measured.
Performance	Suggestions appear within a time target set in testing.
Accessibility	WCAG-aligned, screen-reader support, plain language.
Languages	Bahasa Indonesia and English at launch.

PART VIII

Business Model

Individuals for reach, companies for revenue. Prices are not yet set.

Plan	Who	Includes	Price
Personal free	Individuals	Core features for a limited number of sources.	Free
Personal paid	Individuals	More sources, longer history, advanced summaries.	To be decided (V)
Team	Companies	Workspace, Culture rules, admin controls, audit log.	Per seat, to be decided (V)
Orbis Work	Job seekers and employers	Planned module.	Not decided (F)

Individual use is the entry point. Company plans carry the revenue. Pricing needs willingness-to-pay evidence before it is fixed.

PART IX

Risks, Decisions and Next Steps

Open items and what must be true before launch.

23. Key risks

Risk	Why it matters	Mitigation
Privacy failure	Confidential messages; trust lost quickly.	Privacy built in; independent review before launch.
Hiring law	Automated hiring rules differ by market.	Human review; counsel confirmation per market.
Platform access	Providers may limit message access.	Launch with sources that allow it.
Noisy suggestions	Wrong reminders erode trust.	Easy dismiss; learn from corrections.
Fake profiles	Damages the marketplace.	Verification stages and report queue.
Crowded market	Existing email tools add AI features.	Win on commitments and privacy, not inbox features.

24. Decision register

ID	Decision	Status
D-01	Product name confirmed as Orbis (umbrella brand retired elsewhere).	Open
D-02	Trademark and domain check for Orbis in target markets.	Open
D-03	First connected source(s).	Open
D-04	Pricing for personal and team plans.	Open
D-05	Launch language and market order.	Open
D-06	Whether and when to start Orbis Work.	Open
D-07	Retention windows confirmed by counsel.	Open
D-08	Aura color palette and Ray and Citrine separation.	Open
D-09	Growth layer in the first release, or after the core is proven (recommended: after).	Open
D-10	Whether affiliate recommendations are ever offered, and in which surfaces.	Open
D-11	Keep the 5–9 Freedom Lab name as a method label, or use only "Growth".	Open

25. Glossary

Term	Meaning
Orbis	The product and brand.
Aura	The self-chosen personal profile and portfolio.
Culture	Optional company working rules, visible to members.
Orbis Work	Planned job discovery module.
Commitment	A promise, request or deadline that may need tracking.
Kill switch	A control that pauses all AI features.
Concierge test	A manual service delivered to a few users to test value before building.
Growth	Personal learning and progress layer, based on the 5–9 Freedom Lab method.
Key result	A measurable outcome with a baseline, target and current value.
Progress card	An opt-in summary of chosen metrics the person may share.
